SUMMARY

Senior Solutions Engineer with 7+ years delivering pre-sales, solution architecture, sales enablement and enterprise implementations across high-growth SaaS, AI, RegTech and deep-tech startups throughout EMEA, several of which scaled rapidly, restructured or were acquired. Career intentionally built across early-stage organisations with no existing playbook, joining at founding or pre-scale stages to build commercial infrastructure from scratch, establish repeatable GTM processes and deliver complex customer implementations. Proven expertise spanning technical discovery, enterprise solution design, API integrations, implementation workshops, stakeholder management and cross-functional product feedback loops. MEDDIC-certified. Experienced across cloud infrastructure, AI/ML platforms, CMS/DXP, connected data, network security and enterprise software.

RELEVANT SKILLS

Pre-Sales & GTM: Technical discovery, POC/POV design, enterprise demo strategy, ROI validation, MEDDIC, customer lifecycle management, sandbox builds

Cloud & Infrastructure: AWS, Kubernetes, Snowflake, Databricks, CI/CD automation, SaaS infrastructure, cloud-managed networking

Integration & APIs: REST APIs, OAuth, JSON, Webhooks, Postman, GraphQL, third-party integrations, iPaaS workflows, Salesforce integration (external-ID upsert), MCP/database connectors

AI & Emerging Tech: LLMs, SLMs, RAG, AI workflow design, generative AI, AI adoption enablement, prompt engineering, LLM-powered automation, AI output QA

AI Tooling: ChatGPT, Claude, Perplexity, Midjourney, Make, Zapier, Notion AI, Replit, Lovable, Claude Code, Mobbin, n8n

CMS & Web Platforms: Kentico DXP, WordPress, Drupal, Headless CMS, multi-site management, GitHub, DevOps pipelines, HTML, CSS, JavaScript

Data & Analytics: SQL, Python, Tableau, Power BI, Looker, Sisense, semantic layers, embedded analytics, self-service BI

CRM & Sales Tools: Salesforce, HubSpot, MS Dynamics, Pipedrive, Jira, Notion, Confluence, Figma, Monday.com

RegTech, Risk & Compliance: KYC, KYB, AML, CDD/EDD, UBO analysis, sanctions & PEP screening, adverse media screening, ongoing monitoring, risk scoring, compliance automation, regulatory onboarding, ComplyAdvantage, Veriff, Onfido, IDnow, Checkout.com, PCI DSS

Security, Compliance: SSO, MFA, SAML, Okta, Entra ID, Google Workspace

Customer Support & Success: Pylon, Intercom, Linear, Zendesk, Jira Service Management, Freshdesk, Salesforce Service Cloud, Help Scout, Gainsight

Languages: Igbo, Conversational French

WORK EXPERIENCE

Senior Solutions Consultant, Dotfile, May 2026- August 2026 (Affected by company wide redundancy)

Solutions Consultant at Dotfile, a KYB/KYC/AML compliance platform automating company and identity verification, risk scoring, and ongoing monitoring for regulated businesses.

- Engineered configurable KYB risk-scoring engines in JavaScript, translating client risk matrices into automated knockout, escalation, and weighted-score logic for regulated onboarding workflows.
- Designed and scoped API integrations between Dotfile, enterprise platforms (including Salesforce, HubSpot, Pipedrive and Google Workspace) and third-party verification providers including Onfido, Veriff, Checkout and ComplyAdvantage, enabling automated regulatory onboarding, identity verification and risk assessment workflows.
- Led customer implementation workshops, translating current-state onboarding processes into future-state KYB/KYC workflows, defining configuration requirements, custom properties and phased deployment plans for enterprise clients.
- Governed end-to-end RFP, RFI, and security-questionnaire responses for regulated prospects across payments and financial services, grounding every answer in verified internal product and compliance sources.
- Delivered post-implementation enablement for compliance teams across risk scoring, EDD, AML alert tuning and ongoing monitoring, ensuring successful platform adoption.

Senior Solutions Engineer, Smartcat.ai, June 2025 – January 2026

Smartcat.ai is an AI-powered translation and localisation platform; role owned full EMEA sales cycle from technical discovery and solution architecture through to deal closure and post-sale onboarding handoff.

- Engineered enterprise POCs demonstrating agentic AI translation workflow automation, enabling customers to validate platform fit against content operations use cases and accelerating evaluation cycles from discovery to sign-off.
- Closed over \$200k in enterprise revenue through structured consultative discovery, tailored solution architecture, and ROI validation aligned to workflow automation and cost reduction objectives.
- Led post-sale implementations, configuring AI translation workflows, integrations and customer environments while developing repeatable deployment playbooks that accelerated customer time-to-value.
- Advised Product and Engineering on field-observed friction points, shaping roadmap priorities for integration depth, API extensibility, and platform usability through a structured customer build feedback loop.
- Diagnosed and resolved integration issues across CMS platforms including WordPress, Drupal, and Contentful, ensuring production-grade pipeline stability for enterprise content workflows.

EMEA Sales Engineer, Kentico, April 2024 – April 2025 (Redundancy)

Kentico is an enterprise CMS/DXP platform; role led technical pre-sales across EMEA for global enterprise accounts spanning digital experience, marketing operations, and engineering stakeholders.

- Facilitated solution design and implementation workshops, translating customer digital experience requirements into scalable CMS architectures, integration strategies and deployment roadmaps.
- Engineered an AI-powered RFP/RFI automation system using Python and LLM workflows, a reusable internal accelerator with LLM-generated outputs and human review guardrails, cutting response turnaround by 20%.
- Executed tailored technical narratives aligned to customer business objectives, improving enterprise conversion rates 15% by grounding platform capabilities in measurable digital experience outcomes.
- Advised global accounts on data architecture, DevOps integration patterns, and headless CMS design, ensuring proposed solutions scaled across multi-brand, multi-region digital estates.
- Shaped product roadmap direction by translating enterprise field feedback into structured feature requests, closing the loop between field builds and Product and PMM priorities.

Head of Technical Sales Enablement, Kinsta, July 2022 – November 2023 (Redundancy)

Kinsta is a premium managed WordPress hosting platform; role built Kinsta's global technical sales enablement function from scratch, establishing infrastructure, reusable frameworks, and GTM assets where none previously existed.

- Built Kinsta's global technical sales enablement function from scratch, architecting playbooks, certification paths, demo environments, and competitive reference materials as a scalable GTM foundation.
- Developed reusable demo blueprints and technical documentation libraries, accelerators enabling sales engineers to navigate complex enterprise evaluations and guide infrastructure observability conversations independently.
- Operationalised enablement programmes teaching sales teams to articulate platform performance analytics, monitoring dashboards, and cloud infrastructure use cases to enterprise prospects.
- Mobilised cross-functional feedback loops with Product and Engineering, translating field intelligence into roadmap contributions for observability tooling, reporting capabilities, and platform positioning.

Pre-Sales Solutions Engineer, Wejo , September 2021 – June 2022

Wejo is a connected vehicle data platform that IPO'd in 2021; role joined during rapid post-IPO scaling, owning enterprise technical pre-sales across mobility, fleet, and smart city verticals.

- Engineered SQL and Python-based POCs enabling enterprise clients to query automotive telematics datasets, visualise mobility trends, and extract actionable intelligence for fleet and smart city use cases.
- Represented Wejo as technical evangelist at industry events and partner forums, presenting platform capabilities to external enterprise and infrastructure audiences across the connected vehicle ecosystem.
- Architected reusable data pipeline demonstration patterns translating raw telematics into customer-facing analytics products , packaged as reference assets for the wider sales and solutions team.
- Accelerated sales cycle progression by developing reusable technical assets, demo environments, and evaluation guides, enabling the sales team to self-serve on enterprise prospect engagements.

Pre-Sales Engineer, Mako Networks , June 2020 – August 2021

Mako Networks delivers PCI DSS-compliant cloud-managed network security for retail and financial services enterprise clients; role owned technical pre-sales across distributed multi-site deployments.

- Executed technical demos highlighting security analytics, compliance monitoring, and cloud-managed network capabilities, enabling retail and financial clients to evaluate platform fit against PCI DSS mandates.
- Created pre-sales documentation, competitive battle cards, and reusable evaluation guides, equipping sales teams to navigate complex PCI DSS compliance conversations with enterprise retail and financial buyers.

Manufacturing Engineer, Fusion Building Systems , August 2019 – April 2020 (Role ended due to COVID-19)

Fusion Building Systems is a modular construction company; role applied Lean Six Sigma methodology to analyse and optimise steel and composite production workflows.

- Applied Lean Six Sigma methodologies to redesign production workflows for steel and composite systems, achieving a 22% output increase through root cause analysis and process standardisation.

Creative Design and Innovation Educator, Ministry of Education, UAE , August 2017 – July 2019

The UAE Ministry of Education delivered national innovation curriculum programmes; role designed and executed STEM-aligned projects in partnership with industry leaders including EXPO2020.

- Designed and executed STEM-aligned curriculum embedding design thinking, analytical problem-solving, and real-world project methodology in partnership with EXPO2020 and industry collaborators.

EDUCATION

BEng Design and Manufacturing Engineering

Southampton Solent University September 2012 – July 2017

Undergraduate Design Engineer Placement, Sealed Air, Utrecht , September 2015 – July 2016
